

HostPLM™

PDM on demand with unparalleled flexibility and unlimited power

HostPLM™ is a powerful and scalable private hosting product combining the latest PLM and IT Infrastructure technologies. With HostPLM™ your company can utilize an infrastructure similar to the largest companies around the world at a fraction of the price. The typical HostPLM™ user is companies producing and managing technical documentation, with a need for secure storage, version and revision management, concurrent engineering and collaboration across multiple geographical locations.

The product includes:

- Private Hosting data server build around SolidWorks Enterprise PDM
- Subscription based model, with no up-front investment required
- HostPLM™ includes professional web based interface for suppliers and partners
- Access to your data from anywhere and from any device
- Secure communication and backup of data
- Flexible and Scalable solution with No additional IT server-sided operational costs
- Access to HostPLM End-User support either in local language or in English

HOW

HostPLM™ is a solution build around the “PLM Group - Getting started” Configuration and everything is located on a Private hosted data center where you easy can access all the needed information from anywhere.

PLM Group maintains, update and supervise the hosted data solutions with no need of involvement from customers. There are two ways to work and get access to your data:

Thick Client with powerful functionality:

INSTALL

Login to your customized HostPLM site and get access to software preconfigured for your company and maintained by PLM Group to ensure the latest software and optimal performance

CONNECT

Connect to HostPLM through direct access via web interface or secure client. Its preconfigured for easy setup of client and for access to central cloud servers

Thin and Flexible Mobile Client:

BROWSER

Simply enter your personal URL into any browser. Login and you are up and running. The thin client web interface is also ideal for access through any mobile device.
